

Job Description

Responsibilities

- Troubleshoot and fix data model issues
- Resolve other issues with existing Power BI reports, SQL views, and daily data refreshes
- Create and enhance Power BI dashboards
- Support the technology components of new client onboarding to include such items as building and testing objects and measures in dashboards and tabular models, etc.
- Develop robust and scalable BI solutions
- Maintain delivery to deadlines

Qualifications

- 2-4 years of solid Power BI development experience
- Experience working with Power BI in a recent role
- Excellent knowledge of the DAX and M programming languages, data model development, and report design and implementation experience
- Hands-on experience designing and implementing tabular models (Power BI or Azure Analysis Services)
- Ability to write SQL code to query databases
- Experience with precise requirements gathering and documentation
- Routine use of source control (example Git), as part of regular BI development activities
- Excellent communication skills
- Experience with front-end development using languages such as JavaScript

Desired skills

- Some experience with ETL tools such as Azure Data Factory and/or SSIS
